●

Data Analyst

Baylor College of Medicine

Houston, TX

- Developed pipeline in Python and R for mapping, QC, and downstream analysis of scRNA-seq data collected by collaborators from brain organoids treated with radiation
- Provided exploratory analysis of scRNA-seq data gathered from presbyomic nasal tissue for collaborators
- Constructed pipeline in Python for QC, denoising, and analyzing image mass cytometry data of TNBC cells provided by collaborators

Graduate Research Assistant

UTHSC Houston Graduate School of Biomedical Sciences

Houston, TX

- Developed an ensemble convolutional neural network with self-attention architecture using the TensorFlow and Keras libraries for identifying high confidence transcription factor targets for HTLV-1. Available on Github.
- Performed pseudotime analysis to infer which transcription factor programs drive the trajectory of COVID-19 infection severity using the R packages Seurat and Slingshot in conjunction with DrivAER, a machine learning model developed in Python.
